Ark artifact locations crystal isles

Crystal isles artifacts. Ark crystal isles artifact of the lost. Ark survival crystal isles artifact locations. Ark crystal isles artifact. Ark crystal locations.

Crystal Isles in Ark: Survival Evolved offers a unique experience for players, with easy-to-reach Artifacts and a beautiful environment. In this guide, we'll explore all the Crystal Isles Artifact locations. First, let's start with the Artifact of the Brute. Head to the swamp biome at 71.9, 77.3, where you'll find it on a pillar surrounded by purple flowers. Next, visit the Blood Falls area and locate the small tunnel containing the Artifact of the Clever. The coordinates are 58.4, 33.2. In the desert area, find the Wyvern Heirs to get the Artifact at 76.2, 42.5, located on the outside of a large stone structure. For the Artifact in the tropical area, dive down to 83.1, 25.6, where you'll find it perched on a ledge before the ocean floor. To access the Bee Cave and its Artifact, look for the bright orange cluster of crystals and loud buzzing noise in the Redwoods biome at 31.3, 31.0. Fly in, be careful not to disturb the Bees, and swim down the tunnel with Scuba gear and a water tame. The final Artifact is located in the swamp biome again, but this time you'll need to dive straight down at 66.6, 64.7. As always, beware of hostile creatures. The Wyvern Heirs and cold temperatures pose a threat while acquiring this artifact located at coordinates 75.3, 42.9, situated on top of a pillar in the arctic biome. A brighter color allows for easy spotting during nighttime. Additionally, the desert contains two locations with artifacts at 68.4, 50.5 and 66.4, 40.7. The latter is accessible from an island in the middle of a lake. Another artifact can be found in the Redwood forest at coordinates 30.0, 24.2, inside a fallen tree near a small lake. A tunnel system beneath the arctic biomes requires caution while navigating underwater at 19.0, 40.8. The Copper Mountain contains an artifact located at 54.6, 52.0 near the last waterfall in water. Lastly, two locations exist: one within a cave with threats at 48.4, 75.3 and another on floating islands with artifacts at 23.6, 73.6. Artifact is concealed behind a long waterfall, requiring a flight into the falls to fully appreciate its location. The waterfall is situated near coordinates 39.1 and 44.6, making it suitable for exploration without needing scuba gear. Screenshot by Gamepur This underwater Artifact necessitates scuba equipment and an underwater tame to ward off aggressive creatures within its vicinity. The Artifact lies within a rock shell structure, accessible from 13.8 to 25.4, with the precise location situated at 13.8, 24.4 on the seafloor. Screenshot by Gamepur The ice cave is home to this Artifact, located inside Crystal Isles' largest cave. Various entry points exist, but using the entrance at 31.3, 50.6 may be more feasible with a flying creature companion. Upon entering the cave, navigate through the water and take the smaller exit on the back left to reach the larger cavern. The Artifact resides on a platform at 33.9, 55.5, where fur provides essential protection against freezing temperatures.
